

Plug In.
Power Up.

Move Money as Fast as
the Game Itself

RTGS.global enables iGaming operators and payment providers to access instant cross-border settlement across 45+ currencies via a UI or API connection.

THE OPPORTUNITY

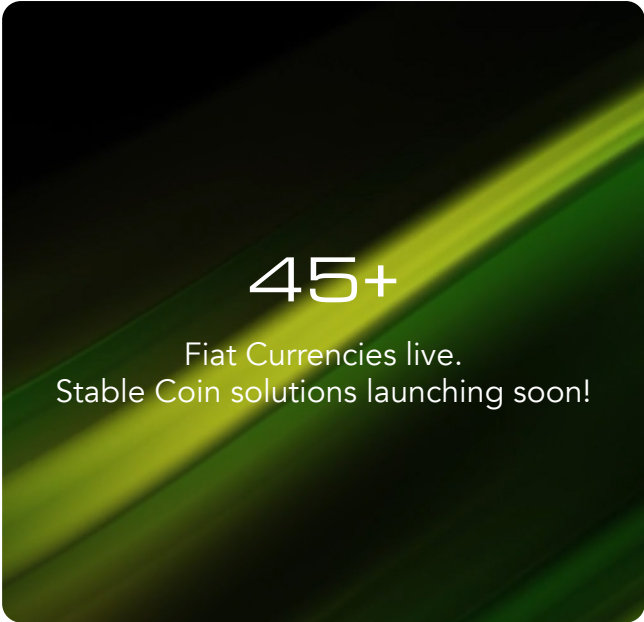

iGaming is scaling globally. Its payment infrastructure has not kept up.

Behind every international iGaming platform is a treasury operation under constant pressure, and most of the infrastructure holding it together was never built for this.

Legacy Infrastructure Is Costing You Players

A delayed withdrawal doesn't just frustrate a player, it loses them. In markets where switching costs are near zero, operators still running payments through legacy infrastructure are quietly handing their competitors an edge. Players don't care about settlement rails. They care about when their money arrives, and the ones who can't deliver instant deposits and real-time withdrawals aren't just behind. They're losing.

01

Settlement Delays

Traditional batch windows and time zone cut-offs leave players waiting hours, or days, for withdrawals. RTGS.global's SaaS platform enables settlement in seconds, with 24/7/365 API access - No cut-offs. No waiting.

02

Fragmented Banking

Managing 20+ banking relationships to cover player markets is operationally expensive and fragile. RTGS.global replaces that complexity with a single network connection to manage all accounts in one place.

03

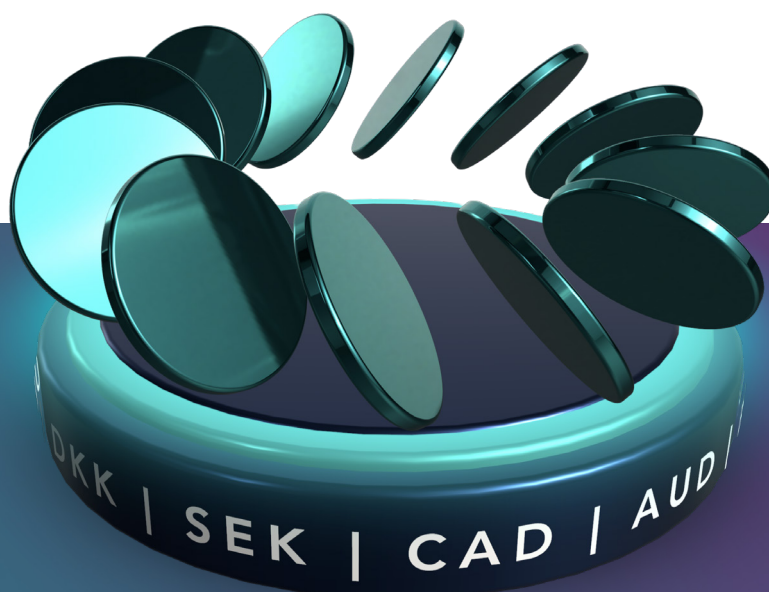

AML & Reconciliation

Opaque correspondent chains make AML reporting and reconciliation slow and costly. The RTGS.global network is fully transparent, with every transaction traceable end-to-end.

04

Settlement Risk

RTGS.global network significantly reduces counterparty risk exposure by removing long chains of correspondent banks.

SETTLEMENT INFRASTRUCTURE FOR REGULATED MARKETS

Plug In Once. Trade Everywhere.

RTGS.global replaces the fragmented correspondent banking chain with a single, cloud-native SaaS platform. Services are delivered through regulated partner institutions on the network. API or UI connection unlocks instant settlement across 45+ currencies, giving iGaming operators and their payments providers the infrastructure to scale internationally without the friction.

PARTICIPANTS IN THE RTGS.GLOBAL NETWORK

iGaming Operators

iGaming operators requiring direct access to fast, multi-currency cross-border settlement.

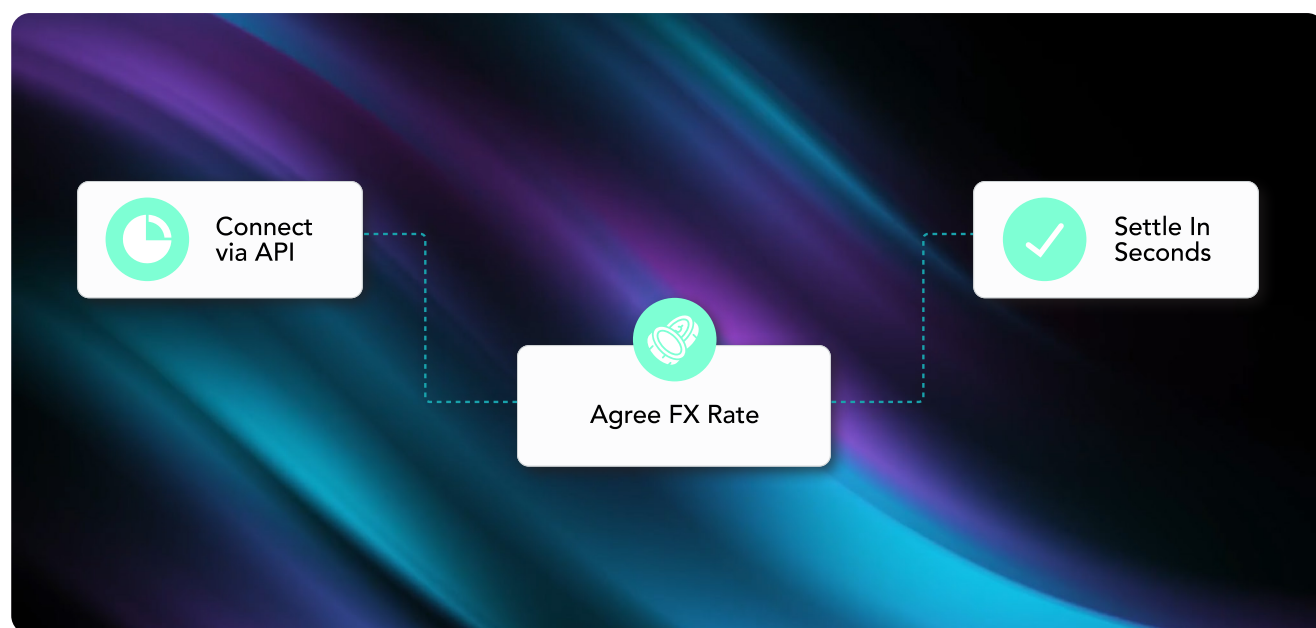

Payments Firms

Payments firms and eMoney institutions that process payments on behalf of iGaming clients and need scalable settlement infrastructure.

HOW IT WORKS

Participants in the network connect via a regulated account provider, known on the platform as a Fund Controller, which is a licensed financial institution that holds and manages local funds. Once connected, Participants trade directly with one another on the platform, executing instant settlement at best price using local payment rails. All accounts support both operating funds and third-party client or affiliate payments.

RTGS.global itself does not hold client funds; it provides the settlement technology layer that enables Fund Controllers and Participants to deliver instant, multi-currency settlement services.

Key Capabilities

Instant Player Payouts

Players can access the ability to deposit and withdraw in seconds, in local currency, any time of day or night via our API. No bank holiday delays, no time-zone cut-offs. Settlement speed becomes a retention tool.

Real-Time FX Settlement

Request quotes and agree FX rates bilaterally with counterparties directly on the platform. Best execution, transparent pricing, and no hidden correspondent markups.

Liquidity Unlocked

Capital that was trapped in nostro accounts is freed, improving treasury efficiency and operational flexibility.

Instant Market Access

Launch new currency corridors in weeks, not quarters. Access 45+ live currencies through one integration, expanding into new markets without building local banking infrastructure from scratch.

API for UI Connection, Full Reach

Our API or UI connection replaces five to ten bilateral ledgers. Modern webhooks and ISO 20022 native message formats keep builds light. Sandbox in minutes, production in days.

Reduced Counterparty Risk

The RTGS.global network significantly reduces counterparty risk exposure by removing chains of correspondent banks.

FULLY REGULATED NETWORK

Every Participant and Fund Controller on the network is fully regulated. Designed for compliance-first iGaming environments: AML-ready, transparent, and regulator-ready from day one.

"Compliance is no longer the obstacle, it's the advantage. The most sophisticated compliance operations in payments aren't in traditional banking. They're in regulated iGaming."

WHY IT MATTERS

RTGS.global vs. SWIFT

The difference between legacy correspondent banking and the RTGS.global platform isn't incremental, it's transformational. For operators moving millions in daily flows, it changes everything.

	LEGACY SWIFT / CORRESPONDENT BANKING	RTGS.GLOBAL PLATFORM
Settlement Speed	1-5 business days	Instant settlement enabled
Cost	High, multiple intermediary fees	Fraction of legacy cost
Bank Holiday / Weekend	Delayed, subject to banking hours	API always available - 24/7/365
FX Transparency	Opaque, rates set by intermediaries	Bilateral, competitive, transparent
Intermediary Hops	Multiple correspondent banks	Direct, no correspondent drag
New Market Access	Years to establish local banking	As little as 72 hours via UI, or as little as two weeks via API
Player Payout Experience	Days, damages trust and retention	Instant payments enabled, drives loyalty

PLATFORM PERFORMANCE

The next phase of iGaming growth won't be won on product.
It will be won on payments.

Plug In, Power Up, Go Live in Days

Unlike building local banking relationships that take years, the RTGS.global platform is designed for fast integration. From first conversation to live transactions in a matter of days.

01

Connect

Speak with our team. Discuss your currency needs, target markets, and transaction volumes.

02

Sandbox

Access API keys and explore the developer sandbox. Build and test in minutes via API or UI connection.

03

Go Live

Move to production in days. One integration unlocks 45+ currencies and instant settlement globally.

04

Scale

Launch new corridors as little as 72 hours via UI, or as little as two weeks for full API connection.

RTGS.global's platform is transformational for our business. Think of it as the Spotify of the payments world.

OPERATIONS, FLASH PAYMENTS**

Ready to Settle as Fast as **the Game Itself?**

In a market where players expect instant access and instant payouts regardless of geography, settlement speed is no longer a differentiator. It's the baseline. RTGS.global is the infrastructure that delivers it.
